NTA

Network Traffic Analysis

Malicious activities leave important traces on networks, traces that are often under-exploited. Attacks can only be contained through increased monitoring. By monitoring your networks with **TEHTRIS NTA**, you will detect abnormal activities automatically and strengthen your ability to react to them.

⤓ **Network monitoring**

⤓ **Abnormal activities detection**

⤓ Access to the **TEHTRIS XDR Platform** and its augmented technology (SOAR, CTI, CYBERIA)

⤓ **Complete coverage** of IT and OT networks

Increase your responses to attacks with **24/7 network monitoring and detection**

24/7

Based on flow capture, **TEHTRIS NTA monitors** inbound and outbound flows (as well as lateral movements) within a given perimeter.

With a database of over 60,000 qualified rules, **TEHTRIS NTA detects** abnormal traffic activity 24/7 using networks signatures analysis and behavioral analysis (**TEHTRIS CYBERIA Artificial Intelligence**).

Adapted to both IT and OT environments, our solution reinforces cybersecurity on forgotten devices (printers, industrial automats...). No additional deployment processes or maintenance are required on your side.

TEHTRIS NTA is directly integrated in the **TEHTRIS XDR Platform**. Our alerts are added to your contextualization as soon as an abnormality or a suspicious activity (scan, exploit...) is detected on your networks.

Easily integrated

TEHTRIS NTA is integrated by adding passive collection points to your IT-infrastructure. Your existing production systems and components are not modified..

Strategic placement of our sensors

Deploy NTA sensors in the most critical parts of your network and target your monitoring in accordance with your security policy.
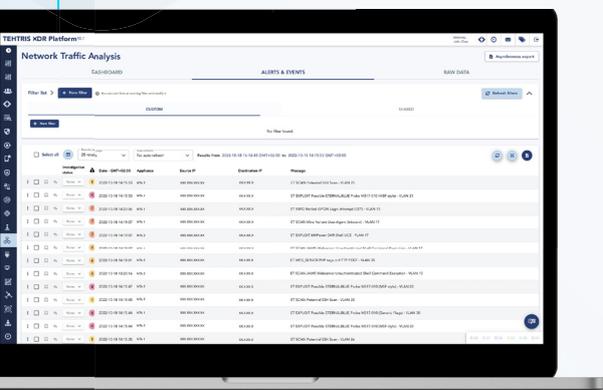

BENEFITS

‣ Easy deployment and integration

‣ Network traffic monitoring: every connected machine, both internal and external (service providers, visitors...)

‣ + 60,000 MITRE-compliant rules that are continuously updated

‣ + 40 types of alerts

‣ Forensic analysis based on Raw Data

Get more detailed investigations with TEHTRIS NTA

The Raw Data view summarizes all network logs collected by **TEHTRIS NTA** and allows you to conduct in-depth investigations.

Get a history of connections made between your machines to see who talked to whom, when and how.
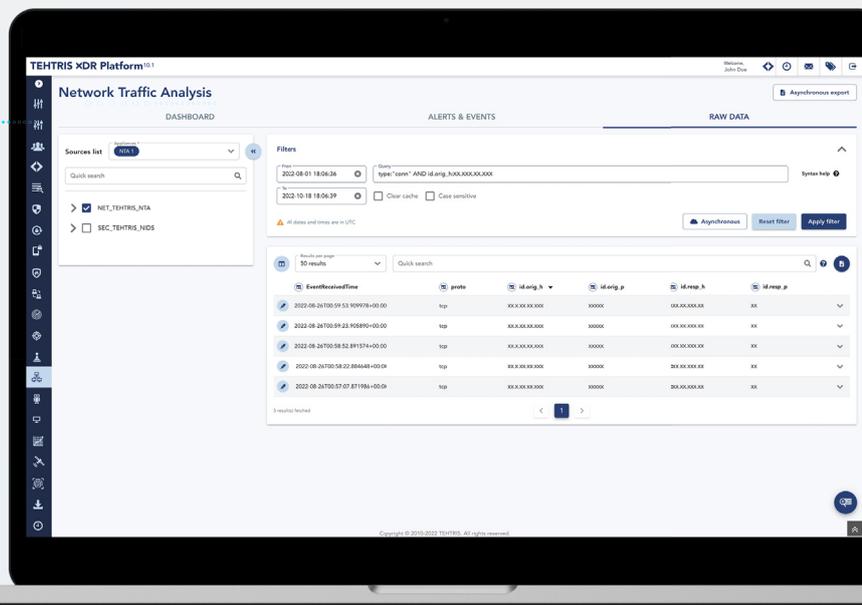

Real-time monitoring of your network

Supervise your alerts in real time and create your own **customized dashboards**, by choosing the criteria adapted to your needs: severity level, IP source or IP destination.

DETECTION

ALERTING

KEY FEATURES

Compatible with all **IT and OT environments**

Real-time network monitoring

Detection of suspicious activities through **signature and behavioral analysis**

Flow analysis based on **+60,000 MITRE-compliant security rules** (continuously updated)

In-depth investigations with our **Raw Data view**

Customizable Dashboards

TEHTRIS XDR Platform is 100% compatible with

MITRE ATT&CK®
